High Performance, High Quality Optical Solutions for Any Application

# About Navitar, Inc.

Navitar, Inc. is a network of companies that design, manufacture, and distribute precision optical solutions. With manufacturing facilities in Rochester, New York and Wharton, New Jersey, Navitar creates lenses used in a myriad of industries, including Biotechnology and Medical, Defense and Security, Industrial Imaging, and Projection Optics. Applications range from machine vision to assembly, and imaging to photonics research and development.

Navitar's optical, mechanical, electrical, and manufacturing engineers truly understand all phases of optical design and manufacturing. Contact Navitar today to find out how we can apply our experience to your unique situation, regardless of industry or application.

## Precision Optical Solutions for Any Application

### Biotechnology and Medical

Navitar has been leading the advancement of medical imaging sciences from the development of the very first x-ray imaging optics for GE Healthcare over thirty years ago. Navitar's high-magnification optics are produced for a variety of medical and biotechnology processes including:

- Flow Cytometry
- Cellular Analysis
- Fluorescence Imaging
- DNA Sequencing
- *In vitro* Fertilization
- Two-Photon Microscopy

### Defense and Security

Top defense contractors have been depending on Navitar since 1954 when the first Navitar-branded lens was developed for the United States Navy for use on CZR-1 missile tracking cameras. Navitar offers commercial-off-the-shelf (COTS) optical systems, as well as custom-built solutions for military, homeland security, and law enforcement applications including:

- SWIR Imaging
- Military Robotics
- Long-Range Surveillance
- 360° Situational Awareness
- Airborne Imaging
- Laser Weapons
- Laser Defense
- Training and Simulation Projection

### Industrial Imaging

Navitar is the leading supplier of optics, optomechanical sub-assemblies, and optoelectronic system solutions for machine vision, automation assembly, imaging, and testing. Our optical designs are used in applications such as:

- Semiconductor Metrology
- Electronic Imaging
- Telecommunications
- Biometrics
- Photonics Research and Development
- Non-Contact Measurement
- Biotechnology

### Projection Optics

Navitar designs and manufactures projection lenses that help to overcome the limitations of standard LCD and DLP projectors. Our off-the-shelf and custom solutions serve many different markets:

- Religious/Praise & Worship
- Home Theater
- Education
- Simulation
- Digital Display
- Planetarium
- Amusement/Theme Parks
- 2D/3D/4D Cinema
- Spherical Display Systems

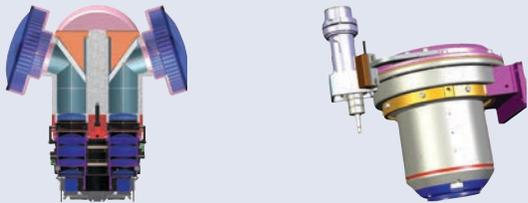

## Custom Lens Design

### Optical Design, Manufacture, Testing & Precision Assembly

Navitar is one of the few lens companies that can seamlessly integrate unmatched engineering capabilities with rapid prototyping and volume custom lens production. We provide state-of-the-art optical and electro-optic solutions that meet the highest standards and solve challenging problems.

When your optical design project advances past the prototype stages, you can count on Navitar's manufacturing capabilities and customer service to deliver consistent quality.

Navitar's sophisticated solutions can be found in applications that demand the finest optical surfaces, highest accuracy and tightest tolerances. To learn how our expertise can bring your concepts to realization, contact your account manager at 585-359-4000 or email [info@navitar.com](mailto:info@navitar.com)

### Custom Design Project Experience

- High NA Objectives
- Long-range Surveillance Lenses
- Femtosecond Laser Optics
- 360° Surveillance Lenses
- Laser Projection Optics
- Telecentric Inspection Lenses
- Projection Lenses
- Laser Beam Expanders
- Fisheye Lenses

## Zoom 6000

### A Workhorse to Fit Nearly Any Application

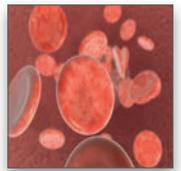

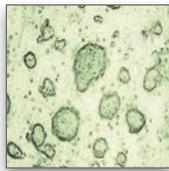

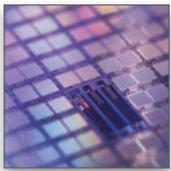

For high magnification applications, the Zoom 6000 series of lenses is the number one choice around the world. Recognized as the industry standard, our versatile 6.5X zoom lenses are designed to give you the magnification powers of traditional microscopes without the bulk or expense. They are easily integrated, assembled, and configured to your exact application. Compared with the competition, the Navitar Zoom 6000 series offers unmatched optical performance, repeatability and mechanical flexibility.

- Dynamic magnification range of 0.09-393X offers incredible versatility.
- High contrast images and vivid colors help your equipment perform better.
- 0.01-125.68 mm field coverage allows you to view a wide range of parts.
- Working distance can be varied from 13 to 390 mm.
- Add infinity corrected objective lenses to achieve unmatched edge flatness and clarity.
- Available with internal coaxial illumination. Review matrix on page 34 for FOV specifications. See the Zoom 6000 system diagram on pages 20-21.

### Applications

Navitar high magnification lenses are utilized in a wide variety of biotechnology and nanotechnology applications including gel documentation, particle characterization, DNA sequencing, flow cytometry, AFM, colony picking, cell sorting and live cell imaging. Navitar high magnification systems are also utilized in the semiconductor and electronics industry for automated visual inspection, FPD fabrication, wafer inspection and non-contact measurement.

## Zoom 6000 UltraZoom

### Combine Infinity-Corrected Objectives for Maximum Resolution and Magnification

Navitar's UltraZoom is a high-performance zoom lens system ideal for semiconductor inspection, flow cytometry, and other high magnification applications. Its advanced design offers high resolution and outstanding contrast. This system incorporates infinity corrected, plan apochromatic objectives providing long working distances and excellent edge flatness and clarity.

Resolution varies from 420 to 1,650 lines per mm, depending on the microscope objective used. The UltraZoom is also available with fine focus and/or coaxial illumination.

## Zoom 6000 Accessories

A full line of accessories is available for our Navitar high magnification imaging systems. To learn more visit [www.navitar.com](http://www.navitar.com) or contact your account manager.

- Right-Angle Mounts & Adapters
- Analyzer
- Adapter Plates
- Infinity Corrected Objectives
- Laser Injection Port
- Aperture Control
- Auxiliary Viewing Port
- Detents
- 2X F-Mount Adapter
- Lens Attachments
- Polarizers

## 12X Zoom

### Navitar's Highest Combination of Zoom Range and Resolution in an Optical System

For high magnification applications requiring the optimal balance between optical performance, large zoom range and price, the 12X is an ideal choice. The 12X Zoom incorporates all the mechanical flexibility of the Zoom 6000 with extended zoom range, higher NA and unbeatable accuracy and repeatability for the most demanding applications. This outstanding combination of zoom range, coupled with large field coverage, means that you will now be able to view a wider range of parts with a single video inspection system and eliminate the need for bulky microscopes.

- Incredible 12X (0.58-7X) magnification for inspection of a wider range of parts.
- Increased resolution with 0.018-0.1 NA.
- Variable working distance from 13 to 341 mm.
- Field of view from 0.006 mm to 85.71 mm with attachments.
- Unmatched edge flatness and clarity.
- Works with 1/4", 1/3", 1/2" and 2/3" format cameras.
- The 12X Zoom System utilizes existing Zoom 6000 adapter tubes.
- Available with internal coaxial illumination. Review matrix on page 36 for FOV specifications. See the 12X Zoom system diagram on pages 22-23.

## 12X UltraZoom

### Unmatched Optical Quality for High Magnification Applications

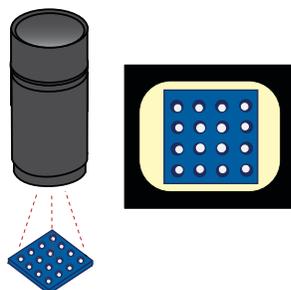

Navitar's 12X UltraZoom incorporates infinity corrected objectives in an advanced design that offers long working distances and outstanding edge flatness and clarity. The system's resolution exceeds 1,650 lines per mm, depending on the objective used. The UltraZoom is also available with fine focus or with fine focus and coaxial illumination.

## 12X Telecentric

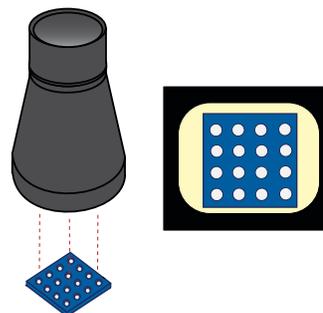

Navitar offers a 12X Telecentric zoom system that allows users to reach a true telecentric condition to within 0.3 degrees, while maintaining constant perspective and magnification. Ideal for a wide range of applications, including precise dimensional measurement of objects or pattern recognition.

There are three telecentric adapters available for use with the 12X Zoom lens: straight (no coax), straight with coax, and right-angle folded with coax. Each has a working distance of anywhere between 166 mm and 188 mm. Magnifications range from 0.16X to 1.94X with the upper 1X adapter, and 0.32X to 3.88X with the 2X adapter. Maximum field of view is 50 mm. An upper 2X F-mount adapter may be used to couple a F-Mount camera. Please contact Navitar for detailed specifications.

Conventional Lens

12X Telecentric Lens

## Precise Eye

Offering high magnification for fixed inspection applications, Navitar's Precise Eye series of lenses is designed to provide superior optical performance over standard C-mount video lenses. See the Precise Eye System diagram on pages 24-25.

- High resolution, diffraction-limited f/4.5 optical quality for high precision measurement and inspection.
- Long working distance makes lighting and handling easier.
- Coaxial lighting available for shadow-free illumination.
- Compatible with high-magnification infinity corrected objectives (5X, 10X, 20X, 50X).
- Mechanically stable for the most demanding vibration environments.
- Modular design for flexibility.
- Optics attach to any C-mount camera.
- Short tube length (~4 inches) and small diameter (1.25 inches).
- Allows for coaxial illumination and/or 3 mm fine focus.
- High transmission (>70%) over the visible to near IR spectrum.

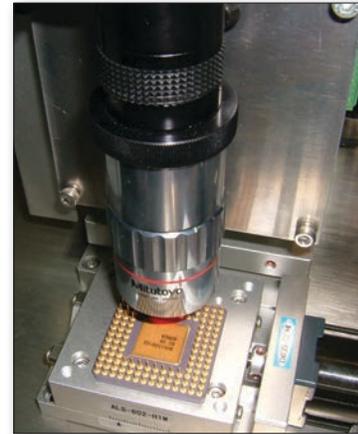

## Ultra Precise Eye

Navitar offers a variety of Ultra Precise Eye systems ideal for high magnification applications. The advanced design produces outstanding contrast and precision, while providing higher resolution and magnification than the standard Precise Eye. These systems incorporate infinity corrected objectives to provide long working distances and excellent edge flatness and clarity. The Ultra Precise Eye is also available with fine focus (1-61521) or with fine focus and coaxial illumination (1-61522).

## Ultra Precise Eye Magnification Matrix

	Mitutoyo 5X ICO (1-60226)	Mitutoyo 10X ICO (1-60227)	Mitutoyo 20X ICO (1-60228)	Mitutoyo 50X ICO (1-60229)
Working Distance	34 mm	33 mm	20 mm	13 mm
Numerical Aperture	0.14	0.28	0.42	0.55
<b>Optical Magnification</b>				
Precise Eye 0.5X Adapter Tube	2.27X	4.55X	9.1X	22.75X
Precise Eye 0.67X Adapter Tube	3.05X	6.1X	12.2X	30.5X
Precise Eye 1.0X Adapter Tube	4.55X	9.10X	18.2X	45.5X
Precise Eye 1.33X Adapter Tube	6.10X	12.2X	24.4X	61.0X
Precise Eye 2.0X Adapter Tube	9.10X	18.2X	36.4X	91.0X

Note: Any brand of infinity-corrected objective may be used.

## Differential Interference Contrast Modules

Two Differential Interference Contrast (DIC) modules are available from Navitar:

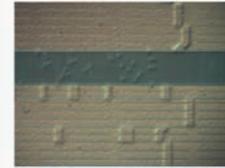

- DIC Assembly Nikon High Resolution module (1-63726)
- DIC Assembly module (1-63102).

Both modules can be used on any ultra coax version (zoom or non-zoom) of the Zoom 6000 and 12X Zoom. The modules work with object side NAs ranging from 0.05 to 0.50, with optimal performance in the range from 0.15 to 0.4. Lens attachments operating in this range will serve for macro applications. Any infinity corrected objectives designed for incident light will suffice for micro.

DIC, when used with reflected light, can often be interpreted as a true three-dimensional representation of the surface geometry. It provides a clear distinction between raised and lowered regions in the specimen.

Visit [www.navitar.com](http://www.navitar.com) to learn more about our DIC modules. See the DIC Module system diagram on page 29.

## NIR Lens Systems

Navitar offers high magnification Zoom 6000, 12X Zoom and Precise Eye systems designed for use in the NIR. Each system has been specially coated to offer high resolution and unparalleled sensitivity for capturing microscopic images in the near infrared (NIR) wavelength band of 700-1550 nm. These modular lens systems can be configured to fit nearly any application.

Body tubes with detents and apertures or motorized are available by custom order. For a complete listing of available NIR parts, please visit [www.navitar.com](http://www.navitar.com) or contact your Navitar account manager.

### NIR Optical Applications

- Wafer Characterizations
- Laser Beam Profiling
- Optical Components Measurement & Analysis
- Fiber Alignment & Inspection
- Thermal Monitoring & Research
- Industrial Inspection
- Solar Cell Testing
- Food Inspection
- Pharmaceutical Applications

## Motorized Solutions

### More Robust Design

Navitar's motorization design, available on the 12X and Zoom 6000 systems, integrates magnetic Hall Effect sensors with reference position location. Hall Effect sensors are solid state devices with no moving parts.

Discovered by Edwin Hall in 1879, the Hall Effect is the production of a voltage difference across a conductor. A Hall Effect-sensing mechanism utilizes a magnetic field to trigger a pulse in a semiconductor circuit. Compared with photo-electric sensors, Hall Effect sensors are not affected by harsh, dirty or dusty environments, ambient room light, or variation in system voltages.

Users can choose to motorize both the zoom and focus axis, or just the zoom. Navitar offers three different motor types:

- 2-Phase Stepping Motor (Faulhaber)
- 5-Phase Stepping Motor (Oriental, Vexta)
- DC Servo with Encoder (Faulhaber)

Most motorized lenses are built to order, which may affect standard lead times.

### Integrated Hall Effect Solid State Sensor Technology

- Unaffected by ambient light
- Unaffected by environmental contamination
- Unaffected by line voltage

### Controller Options

HE Manual Motor Controller: Navitar's Hall Effect manual motor controller (1-62823) is designed to allow manual operation of any of the Navitar Hall Effect motorized lenses.

Motorized Control System: Motorized controllers feature single or dual axis control via serial RS-232 or USB. Control systems are available as table-top or board level for the OEM. Software includes LabVIEW VI and Windows Graphical User Interface (GUI) for simple axis control.

Contact Navitar for part numbers and further specifications.

### Motorized Zoom 6000 Options

# ILLUMINATION PRODUCTS

## LIGHTING ACCESSORIES

ILLUMINATION has proven to be one of the most important components when designing a successful imaging system. Navitar understands that the correct lighting can only enhance the performance of our industry leading vision systems. We offer LED ring lights, Brightlight LED coaxial illuminators, fiber optic illuminators, and power supplies.

### Fiber Optic Illumination

Fiber optic illuminators are the most versatile on the market today. Consisting of a high-powered light source, Navitar's fiber optic illuminators can be used with ring lights or flexible light pipes for oblique or coaxial illumination.

Navitar offers a series of high-intensity fiber optic illuminators and accessories that allow you to position your light for best possible viewing. These fiber optic illuminators consist of a halogen illumination system with a variable light intensity control. They accept a single or dual light pipe or an attachable ring light for illuminating a wider area.

### LED Illumination

Navitar's LED-based ring lights and coaxial lights were designed with careful consideration for the standard working distances that most of our customers use. The components are low profile and provide bright, even illumination to complement the performance of your vision system.

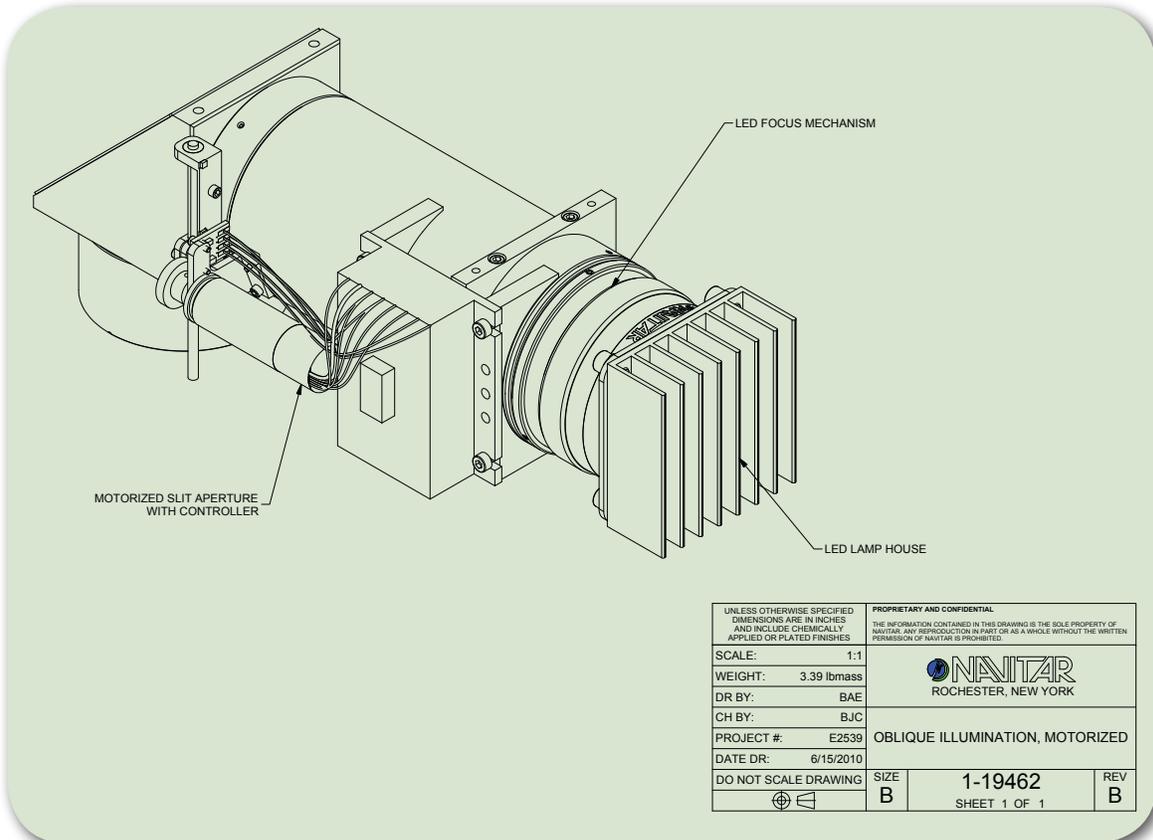

Benefits Include:

- Longer life.
- Minimum power loss.
- Narrow wavelength band (red), constant color temperature (white).
- Small packaging with optimal heat management.
- No fan vibration.
- Lower cost.

## Custom Illumination

Navitar designs and manufactures custom illumination systems specific to your application. Contact one of our application engineers to discuss your unique project requirements.

## Fluorescent Imaging System

### ZFL Fluorescent Video Scope

Navitar's Video ZFL Scope is a macro/micro fluorescence vision system that utilizes interchangeable fluorescence cubes and internal focus to create an image. The scope offers a simple, cost-effective solution for what are often sophisticated and complex fluorescence imaging tasks. A system diagram may be found on pages 26-27. A key feature of the ZFL system is its modularity. Our component parts can be configured into any type of system you can imagine.

Our macro fluorescence vision system encompasses a low-noise, scientific-grade digital camera, along with quantitative software, and LED illumination or UV light source. The micro imaging vision system mode provides a 0.9X coupling of any standard 200 mm tube length, infinity-corrected, fluorescent microscope objective to the camera. See our website for a complete list of Navitar's products for biomedical imaging applications.

#### Common Applications

- Flow Cytometry
- Live Cell Imaging
- Laser Confocal Imaging
- Cell Sorting
- DNA Sequencing
- Proteomics
- Microarray Scanning
- Gel Documentation
- Colony Picking
- Mass Spectrometry
- Air & Water Pollution Testing
- Forensic Examination
- Capillary Flow Observation
- Art Restoration

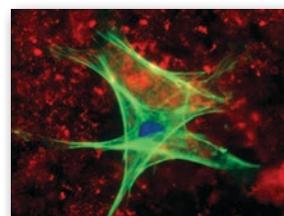

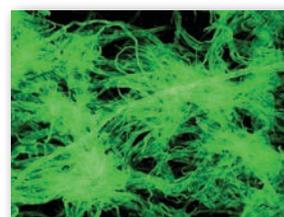

#### Features

- Utilizes interchangeable fluorescence cubes to create images compatible with most existing camera systems.
- Less expensive and more compact than a traditional microscope.
- Field of view up to 9.2 mm with a 2/3" CCD in macro mode.
- Micro mode utilizes infinity corrected objectives.
- Remote UV light source includes a long-life metal halide bulb.
- Zoom and fixed systems available. Fine focus is included with both systems.

### Macro ZFL Field of View Matrix

Lens Attachment	Working Distance	Camera Format	1X Mini or T-Mount	1.33X Mini	2X Mini, F-Mount or Standard

		Sensor 2/3"	2.1 x 1.6	1.6 x 1.2	none

## Fixed Tube Lens System

Navitar's fixed tube lens system was designed for customers utilizing larger sensors. With the correct combination of parts, this system can be used on 4/3" cameras (22 mm image circle). The components are designed to be highly corrected to eliminate chromatic aberrations. Our standard adapters and adapter modifiers may be placed above the tube lens.

### 1X Tube Lens Field of View Matrix

## Dual View Lens System

Navitar's dual view system was initially developed for the thin film transistor (TFT) repair industry and has also been used for applications requiring a wide field of view range.

The dual view module offers the ultimate in adaptability and versatility; the system has a single objective lens and presents it to two separate imaging channels. These channels can be fixed, zoom, or a combination of the two. Two different light sources and wavelengths allow for the inspection of multiple types of materials. The use of different adapter tubes on each optical path provides a much wider field of view, without changing workstations or lighting setups.

The Dual View Lens System Diagram is found on page 30.

## Large Format Lenses

Navitar's large format lenses meet the demands for high center to edge resolution, low distortion, and application specific F-numbers. These lenses are not modified video lenses; they are designed to match the performance abilities of high-end megapixel type cameras.

	Part #	Mount	Image Diagonal (mm)	Focal Length (mm)	F/# Range	Minimum Operating Distance (meters)	Image Size at MOD		Filter Thread

### Large Format Lenses Offer Many Benefits

- Larger format design for line scan and area scan cameras.
- Low distortion center-to-edge.
- Wide field design for close-up imaging.
- Large depth of field.
- Diffraction limited.
- Exceptional contrast.

## SWIR Hyperspectral Lenses

Navitar's fixed focal length SWIR Hyperspectral lenses are specifically designed for short wave infrared (SWIR) cameras and applications. SWIR Hyperspectral imaging applications require the optical system to efficiently transmit light in the visible, NIR and SWIR wavelengths. To do this, the lens design and coatings must be capable of maintaining a high level of transmission throughout a broad wavelength range.

Navitar's SWIR Hyperspectral lenses offer high resolution images in conditions ranging from bright daylight, fog/haze, twilight and dusk. Our standard SWIR lenses are specially coated for imaging in the SWIR wavelength, and designed to cover 1" (16 mm diagonal) sensors. They offer high resolution images and transmission in the 700 - 1900 nm wavelength of 75% or better.

Navitar's newest OptiStar® lenses are designed and optimized for high performance in SWIR applications. These lenses function in the wavelengths of 500 - 1700 nm with 90% +/- 5% transmission across the range, and are ideal for dark or nighttime applications.

### Common Applications

- Night/Day Security
- Solar Panel
- Semiconductor Wafer Inspection
- Perimeter Surveillance
- Machine Vision
- Medical
- Biometrics
- Aerial Imaging
- Food Sorting

### Standard SWIR Lenses - 1" Format for use with 1/2", 2/3" and 1" Cameras

Model	Focal Length (mm)	F-Stop Iris Range	Iris Control	Focus Control	Object Area (mm) at M.O.D. (HxV); 1"	Object Area (mm) at M.O.D. (HxV); 2/3"	Object Area (mm) at M.O.D. (HxV); 1/2"	Focusing Range (meters)	Mount Type
SWIR-8	8	1.4-16	Manual*	Manual*	167 x 123	112 x 82	80 x 59	0.1 - inf.	C

\* Manual iris and focus with locking screws.

### OptiStar® Lenses - 1/2" Format for use with 1/2" and 1/3" SWIR Cameras

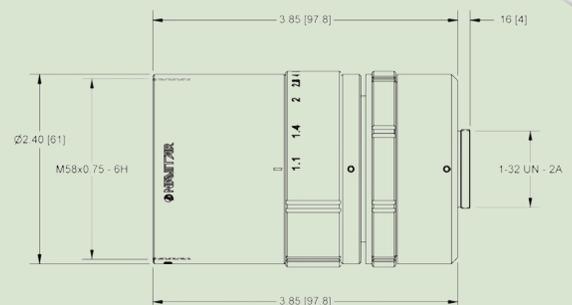

Model	Focal Length (mm)	F-Stop Iris Range	Iris Control	Focus Control	Object Area (mm) at M.O.D. (HxV); 1/2" CCD	Object Area (mm) at M.O.D. (HxV); 1/3" CCD	Focusing Range (meters)	Mount Type
1-18882	25	1.4-11	Manual*	Manual*	194 x 135	146 x 101	1 - inf.	C
1-19179	50	1.1-8	Manual*	Manual*	102 x 78	77 x 59	1 - inf.	C

\* Manual iris and focus with locking screws.

### Custom SWIR Lens Design Experience

Navitar offers custom-designed SWIR solutions and welcomes your project request. We have designed and built several custom lenses, including a system that detects visible near infrared (NIR) and short wave infrared (SWIR) wavelengths (500 - 1600 nm). The custom design was a F/1.35, 25 mm, C-mount lens.

Please contact your account manager for a custom SWIR quote today.

## Navitar Machine Vision Lenses

Navitar's low magnification CCTV lens offerings are the benchmark against which all CCTV video lenses should be measured. Quality construction, coupled with precision engineering, results in high resolution, optically precise video lenses. We offer a complete range of imaging lenses for every industrial and robotic image processing application.

- Up to 3K sensor coverage
- High resolution
- Low distortion
- Megapixel lenses
- High speed lenses
- Affordable pricing

## Fujinon Video Lenses

Navitar offers a wide range of Fujinon video lenses. Fujinon lenses are ideal for the growing number of video imaging applications in which a single, constant magnification factor and a fixed working distance are required to maximize contrast and performance.

## High Speed Lenses

Navitar high speed fixed focal length lenses work with CCD & CMOS cameras. Our C-Mount, 1" format lenses are designed for 17, 25 and 50 mm focal lengths and are well suited for low light applications. Please call us for more information on motorized versions.

## Telecentric Lenses

These high-resolution, low distortion lenses are designed to work with camera formats of 2/3" and smaller and also support megapixel cameras with 3.5µm pixels. Applications include metrology, flat panel inspection, curved surface inspection, and other imaging applications when greater depth of field is required.

# Zoom 7000 Series

Navitar's Zoom 7000 series includes lenses used in a wide range of applications. The Zoom 7000 is ideal for quality assurance, biomedical imaging and industrial applications; the Navitar Zoom 7010 allows for high resolution imaging and is excellent for visual inspection of electronic components.

## Zoom 7000

The Zoom 7000 is a versatile, close-focusing macro video lens specifically designed for applications where objects over 1" in diameter must be imaged. It offers unsurpassed clarity and parfocal zoom capabilities and is compatible with cameras 2/3" or smaller.

### Features

- Working distance 5" to infinity.
- Parfocal over entire zoom range.
- Highest mag. 1.1X at 5" (at camera).
- 6X magnification power over 18 mm to 108 mm focal range.

## Motorized Zoom 7000

Navitar also offers a Motorized Zoom 7000 with 2-phase stepper motors for zoom and aperture control. The Motorized Zoom 7000 is ideal for automated quality inspection and assembly, biomedical imaging, printed circuit board (PCB) and electronic inspection, and fuel gauge monitoring.

### Features

- 2-phase stepper motors.
- Hall Effect sensors to reference position.
- Compatible with Navitar 2-phase controllers (2-62577, 1-62420).
- Windows-compatible.

## Zoom 7010

The Navitar Zoom 7010 Macro Zoom lens is specifically designed for use with a 1/3" or smaller camera and has a 10X zoom ratio. The 10X Macro Zoom lens allows close-up image capture without extension tubes or close-up lenses and the up-to-10X magnification variable (zooming) capability allows small objects to be expanded for close-up observation.

### Features

- Imaging at distances from 7-12"
- Working distance of 16" to infinity when the built-in close-up lens is removed.
- Very high resolution.
- C-mount is standard.

## Zoom 7000E

The Zoom 7000E system is designed for use in educational applications where industrial inspection and imaging features are less essential. It offers a 6:1 zoom ratio over a focal range of 12.5 mm to 75 mm. The Zoom 7000E system incorporates many of the features of the Zoom 7000 and 7010 systems at an attractive price.

### Features

- Eliminates eyestrain from prolonged microscope viewing.
- Can be used as overhead video projector.
- Provides high-resolution color images.
- Works under room light conditions.

## Zoom Xtender

The Zoom Xtender allows you to adjust your lens working distance from 150 mm to infinity. The Xtender allows you to maintain your internal focus and parfocal zooming, as well as keep your computer controlled motorization and detents.

### Features

- Maintains internal focus and parfocal zooming
- Adjusts working distance 150mm to infinity
- Online Zoom Xtender Calculator [www.navitar.com/support/xtender\\_calculator.html](http://www.navitar.com/support/xtender_calculator.html)

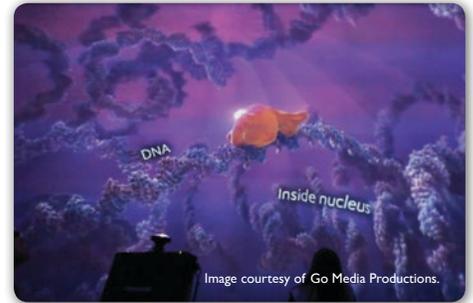

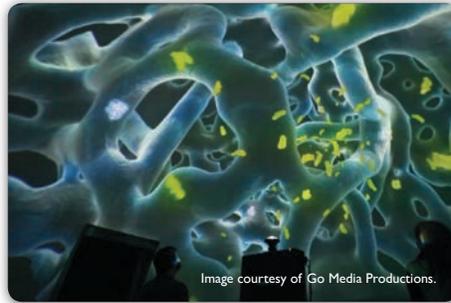

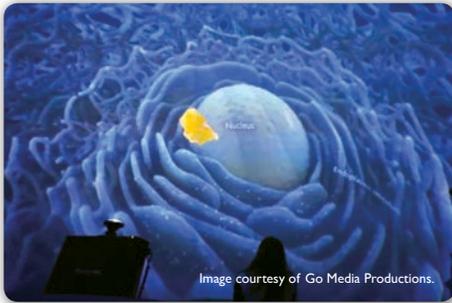

## HemiStar® Fisheye Projection Lenses

Navitar has designed and produced world-class projection lenses since 1978. Today, we offer an innovative series of HemiStar lenses ideal for small, medium and large planetariums, as well as simulation and immersive projection.

Our fisheye projection lenses have an almost infinite depth of focus, allowing them to maintain sharpness in a variety of settings.

We offer both single- and multi-projector solutions for either 2K or 4K resolution.

### Exciting Applications

IMMERSIVE ENVIRONMENTS • COMMAND & CONTROL • AUTOMOTIVE DESIGN • EDUCATION  
PLANETARIUMS • PRAISE & WORSHIP • SIMULATION • MUSEUMS • THEME PARKS & ATTRACTIONS

## Markets We Serve

- 3D/4D Theater
- Cinema Advertising
- Consumer Electronics
- Corporate
- Digital & Retail Signage
- Education
- Government & Military
- Home Theater
- Interactive Projection & Amusement
- fMRI Projection Applications
- Planetarium
- Portable Presentation
- Rental & Staging
- Spherical Display Systems
- Training & Simulation
- Worship Facilities

# Custom and 4K Projection Optics

## Custom Projection Optics

Navitar offers custom projection lens solutions. Our design team of optical, mechanical and electrical engineers have years of experience and are ready to design and seamlessly integrate a custom projection lens into your system. Contact us today for a quote.

## 4K Projection Lenses

We offer lenses for Sony and JVC 4K projectors. The Sony lens has a 0.8:1 throw ratio and offers a vertical lens shift of +/- 20%, and allows users to closely stack two projectors. The widest lens Sony offers for this projector is a 0.9:1 ratio. A long throw zoom lens has also been developed for JVC with a 2.1-5.0:1 throw ratio.

## Military Simulation Optics

Navitar has experience building custom lenses used in JVC and Sony projectors for military flight simulators. With throw ratios of 0.9:1, 1:1, and 1.2:1, the lenses provide bright, sharp images and perfect color registration to all four corners of the projected image.

## Engineering Expertise

We have...

A thorough understanding of:

- Application-specific resolution requirements of planetariums and simulators.
- Relay and non-relay designs.
- Fisheye lenses and F-theta distortion.
- Uniform pixel mapping at edge of images.
- Unique characteristics of different chip sets, color off-sets, and panel size variations in light engines.

Extensive experience with:

- Straight and right-angle mechanics.
- Rectilinear and fisheye design requirements.
- Designing to customer masking requirements.
- Tolerance and sensitivity analyses.

Examples of Recent 2K and 4K Custom Lenses							
Projector	Modulation Transfer Function (MTF)		Relay?	FL (mm)	Surface	F/#	FOV (H)

Note: Please contact Navitar regarding commercial availability of above lenses.

## NuView® Lenses

Replaces the Existing Prime Lens of Your Projector

### One Change Is All You Need

NuView lenses replace the existing prime lens of your projector and allow you to use your projector in a variety of applications. NuView lenses are compatible with LCD, DLP, DILA and LCOS projectors.

### NuView Long Throw Zoom Lenses

Use a long throw lens to increase projection distance and move your projector farther from the screen. The zoom feature allows you to choose your projection distance and image size by simply rotating the lens. See available lenses and specifications in table below.

### NuView Wide Angle Fixed Focal Length Lenses

Use a wide angle lens in rear screen applications or to produce much larger images for front projection. See available lenses and specifications in table below.

### NuView Lens Projection Chart

Navitar long throw zoom (MCZ) and fixed focal length (MCL) replacement lenses are listed below with their focal lengths (in both mm and inches) and distance to width ratios for compatible projector panel sizes. Complete Navitar part numbers include a three-digit projector-specific prefix. A complete list of lenses available by projector manufacturer can be found at [www.navitar.com](http://www.navitar.com).

\* Please contact a Navitar sales representative to discuss suitable applications.

# ScreenStar® Lenses

Navitar's ScreenStar conversion lenses are placed in front of your projector's standard lens to change image size or throw distance.

- These lenses decrease the overall cost of installation by allowing you to reduce the number of projectors being used, or by selecting a lower cost, less featured projector.

ScreenStar lenses work with LCD, DLP, DILA and LCOS projectors.

Navitar offers table mounts and ceiling mounts for ScreenStar lenses. No mounting options are currently available for the SST300. Please contact your account manager for more information.

SST120 with Table Mount

## ScreenStar Conversion Lens Specifications

### Wide Angle Lenses

Lens	Part #	Description	Image Conversion	Lens Details
	SSW065	0.65X wide angle converter	50% larger image	Increases picture size by 50% from the same projection distance or maintains the same image size while moving the projector 33% closer to the screen.
	SSW08	0.8X wide angle converter	25% larger image	Increases picture size by 25% from the same projection distance or maintains the same image size while moving the projector 20% closer to the screen.

### Telephoto Lenses

	SST120	1.20X telephoto converter	17% smaller image	Reduces picture size by 17% from the same projection distance or keeps the same image size while moving the projector 20% farther away from the screen.
	SST150	1.50X telephoto converter	33% smaller image	Reduces picture size by 33% from the same projection distance or keeps the same image size while moving the projector 50% farther away from the screen.
	SST300*	3.00X telephoto converter	67% smaller image	Reduces picture size by 67% from the same projection distance or keep the same image size while moving the projector three times farther away from the screen

### Mini Wide Angle Lenses

	SSC065	0.65X mini wide angle converter	50% larger image	Increases picture size by 50% from the same projection distance or maintains the same image size while moving the projector 33% closer to the screen. Compact and lightweight; ideal for small aperture projectors.
---	--------	---------------------------------	------------------	---

### High Definition Lenses

	HD SSW065	0.65X HD wide angle converter	50% larger image	Increases picture size by 50% from the same projection distance. With a large aperture to prevent vignetting, this highly-corrected lens system is optimized for 1080P resolution.
	HD SSW08	0.8X HD wide angle converter	25% larger image	Increases picture size by 25% from the same projection distance. With a large aperture to prevent vignetting, this highly-corrected lens system is optimized for 1080P resolution.

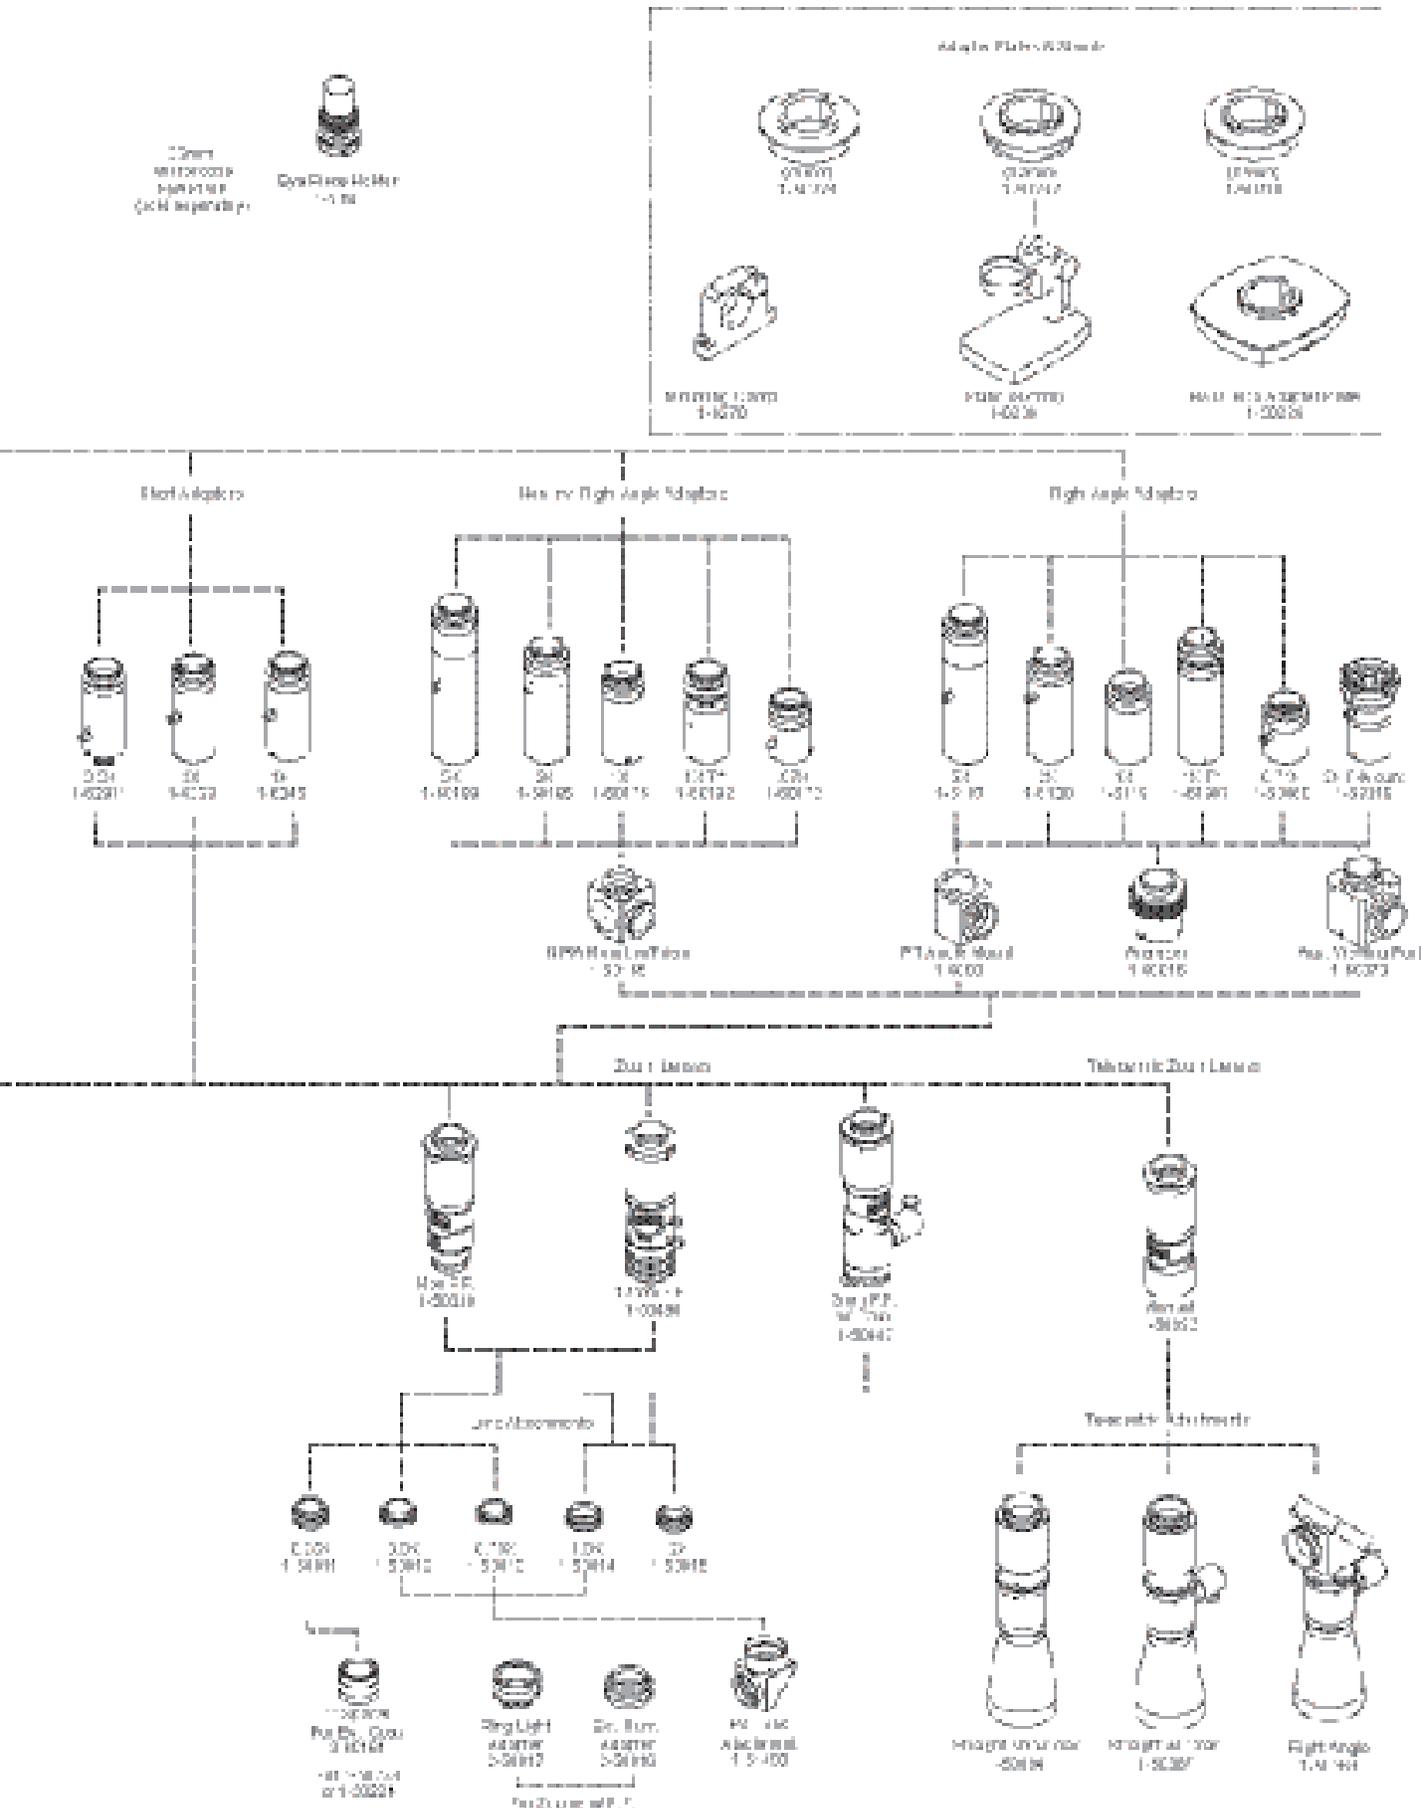

\*All lenses include a stabilizing leg *except* the SST300. No mounting options are currently available for the SST300.

Notes:  
 The above fields of view are measured diagonally in millimeters (Horizontal = Diagonal x 0.8 and Vertical = Diagonal x 0.6).  
 (1) Working distance range when using 12 mm fine focus. Field of view will change with shorter or longer working distances.  
 NA varies depending in system magnification.

**Notes:**

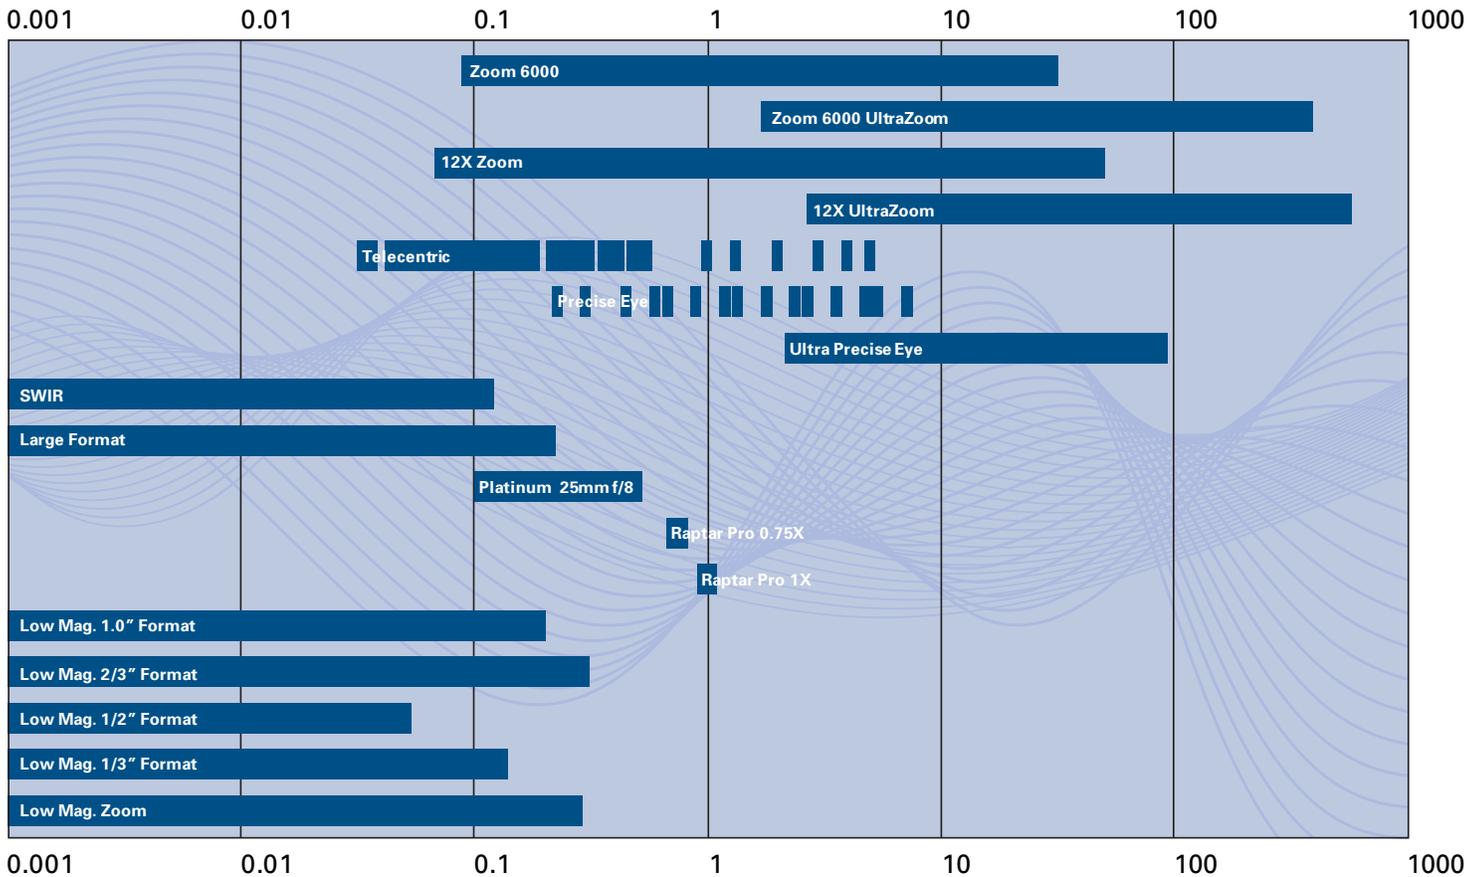

The internal coax will illuminate a circular area of about 11 mm in diameter. Any field of view larger than 11 mm will have darkened corners.  
(1) Working distance range when using 3 mm fine focus. Field of view will change with shorter or longer working distance.

## Magnification Overview of Navitar Lenses

### Magnification

## General Lens Formulas

### Focal Length

$$FL = CCD \times WD / FOV$$

### Magnification

$$m = \text{Image Size} / \text{Object Size}$$

### Object to Image Distance

$$OI = [FL \times (1+m)^2] / m$$

$$OI = m(FL) + (FL + VOA + BF) + FL / m$$

VOA = Vertex to Vertex Lens Length

### Object to Lens Distance

$$OL = FL + FL / m$$

### Lens to Image Distance

$$LI = FL + FL / m$$

(Approximate distance to the nodal points:  
FL + FL(m) to the front vertex.)

$$F/\# = 1 / (2NA)$$

$$F/\# = FL / \text{Entrance Pupil Diameter}$$

$$NA = 1/2 F/\#$$

$$NA = \sin \theta / 2$$

### Effective F/#

$$\text{Eff. } F/\# = F/\# (m+1)$$

### Clear Aperture (Minimum)

$$\text{Aperture} = FL / (F/\#)$$

### Depth of Focus

$$\text{DoF} = 0.00002 / NA^2 \text{ (in inches)}$$

$$\text{DoF} = 0.0005 / NA^2 \text{ (in mm)}$$

### Conversion Factors

1 inch = 25.4 millimeters

1 meter = 39.37 inches

1 degree =  $\pi / 180$  radians

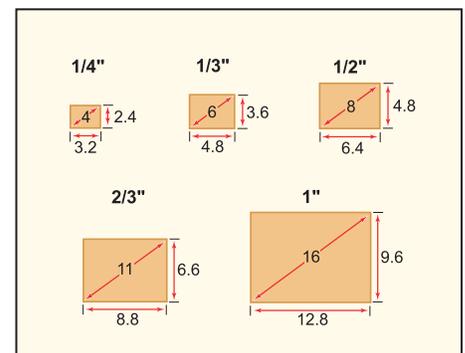

1 degree = 0.0174533 radians

1 micron ( $\mu$ ) = 0.001 millimeter

1 micron ( $\mu$ ) = 1,000 nanometers (nm)

1 micron ( $\mu$ ) = 10,000 angstroms ( $\text{\AA}$ )

### Image Sensor Size (units in mm)

## Online Resources

### The Optical Wizard

With our patented online tool, the Optical Wizard, you can easily configure complete imaging solutions. The Wizard offers customized suggestions to suit your needs and budget.

## How to Order

Call 585-359-4000 or call us toll-free at 800-828-6778.

Visit [www.navitar.com](http://www.navitar.com) for secure and simple online ordering, or email us at [info@navitar.com](mailto:info@navitar.com).

Submit your purchase order by fax at 585-359-4999.

# Optical Solutions for Many Applications & Industries

## Biotechnology and Medical

- Flow Cytometry
- Cellular Analysis
- Fluorescence Imaging
- Laser Eye Surgery
- DNA Sequencing
- *In vitro* Fertilization
- Gel Documentation
- Two-Photon Microscopy

## Defense and Security

- SWIR Imaging
- Military Robotics
- Long-Range Surveillance
- 360° Situational Awareness
- Airborne Imaging
- Laser Weapons
- Laser Defense
- Training and Simulation Projection

## Industrial Imaging

- Semiconductor Metrology
- Electronic Imaging
- Telecommunications
- Biometrics
- Photonics Research and Development
- Non-Contact Measurement
- Biotechnology

## Projection Optics

- Religious/Praise & Worship
- Home Theater & 2D/3D/4D Cinema
- Planetarium
- Amusement/Theme Parks
- Simulation
- Education
- Spherical Digital Display Systems
