Electrical behavior of the device

The DIM pin has to be used: if not, the device is OFF.

Apply a constant voltage, lying between OV and 24V, on this pin.

When a 24V voltage is applied, the device is at full power; if a 0V voltage is applied, the device is completely off.

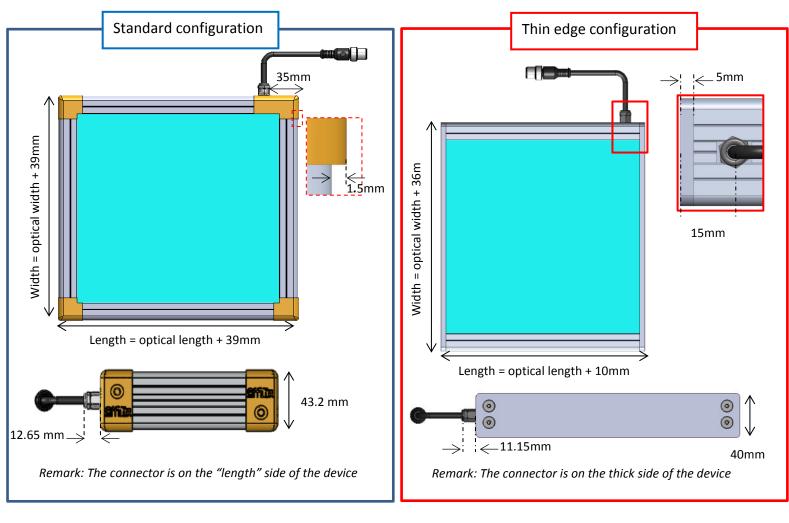

Make sure that you never exceed the maximum voltage. The device is supplied with a 24V ($\pm5\%$) constant voltage source.

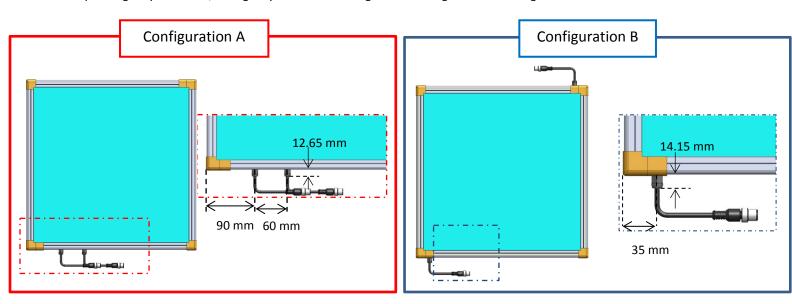

Mechanical considerations

Devices are provided with a 500mm cable.

Depending on your needs, the light system can be designed according to the following mechanical constraints.

4	Black	DIM – max 24V

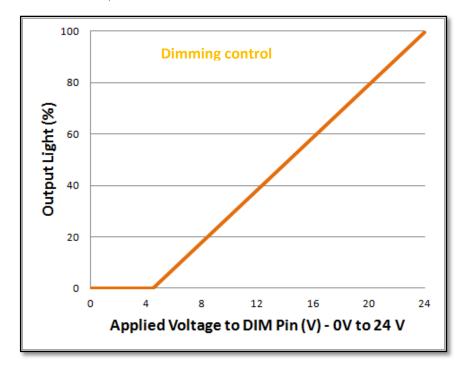

Dimming control

The DIM pin has to be used: if not, the device is OFF.

The EFFI-Flex-BL, with a reference EFFI-Flex-BL_XXX _XXX, is supplied with a 24V constant voltage source. Using the DIM pin, the light intensity can be linearly increased:

- 0V OFF
- 24V full power

Electrical Power requirement

Apply the next formula to determine the electrical power of your lighting :

$$Power_{electrical} = \frac{Length_{in mm}}{100} * 5 W$$

Example: EFFI-Flex-BL-500 is made of 5 segment

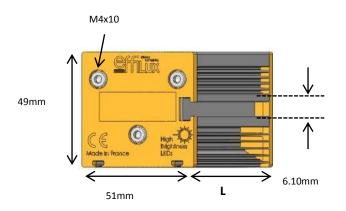

$$Power_{electrical} = \frac{Length_{in\;mm}}{100} * 5 W = \frac{500}{100} * 5 W = 25 Watts$$
